

***noMAX SENTRY**

*noMAX sentry is a cost effective High Availability solution that facilitates the replication of data between single iSeries or multiple iSeries platforms.

*noMAX sentry is easily navigable with concise, user-friendly menus.

It is a cost-effective solution that comes with some very powerful tools and superior technology.

*noMAX sentry is simple to implement – the software can be running on your system within an **hour**.

BENEFITS

***noMAX sentry is a scalable High Availability solution that ensures you have the ability to keep your data secure – any time, all the time.**

- + *noMAX sentry is quick and easy to install, providing your organisation data replication with minimum impact and maximum effect.
- + *noMAX sentry, like all *noMAX products is IBM Server Proven and operates on IBM iSeries platforms.
- + *noMAX sentry utilises the capabilities of remote journaling, enabling you to realise savings in resource, time and cost.
- + If your replication needs grow you can easily migrate to *noMAX defender or *noMAX garrison quickly and cost-effectively.

THE *noMAX SUITE OF PRODUCTS

***noMAX can provide data, data & object, or data, object & IFS replication, depending on the requirements of your business.**

Data

Offers an easy to install, cost effective stand alone solution that replicates data.

Object

Replicates in real time Data Areas, Data Queues and User Profiles as well as enabling 'on the fly' Dynamic Database Changes and object replication.

IFS

Provides real-time replication of IFS, including file paths, structures and IFS data.

*noMAX SENTRY

*noMAX DEFENDER

*noMAX GARRISON

noMAX defender

Securing your company's critical information

*noMAX DEFENDER

*noMAX defender delivers secure, accurate and cost-effective replication of both data and objects on your iSeries.

Like all *noMAX products, *noMAX defender requires little more than an hour's installation time.

It is so easy to implement and manage that no extra resource is required to ensure its overall effectiveness in your business.

*noMAX defender enables you to replicate data *and* objects with unlimited scalability.

BENEFITS

***noMAX defender facilitates the replication of data and objects between ASP's and LPAR's on either a single iSeries system or between multiple systems; whatever your requirements.**

- + Data Areas, Data Queues, User Profiles and Dynamic Database Changes can be replicated quickly and effectively with no disruption to your ongoing operation.
- + If the need to keep your business information secure involves more than just replicating data, *noMAX defender meets this need without you having to contemplate massive investment in time or money.
- + Your High Availability solution can develop with the growth of your organisation. *noMAX defender is simple to migrate to *noMAX garrison, with an implementation that can take as little as half an hour.

THE *noMAX SUITE OF PRODUCTS

***noMAX can provide data, data & object, or data, object & IFS replication, depending on the requirements of your business.**

Data

Offers an easy to install, cost effective stand alone solution that replicates data.

Object

Replicates in real time Data Areas, Data Queues and User Profiles as well as enabling 'on the fly' Dynamic Database Changes and object replication.

IFS

Provides real-time replication of IFS, including file paths, structures and IFS data.

*noMAX SENTRY

*noMAX DEFENDER

*noMAX GARRISON

noMAX

*noMAX GARRISON

The ultimate iSeries High Availability solution that enables your company to replicate IFS, as well as data and objects.

Like *noMAX sentry and *noMAX defender, installation and implementation of *noMAX garrison is quick and easy.

Day to day management of the software requires little time and resource.

With its extensive range of tools and features, *noMAX garrison is the ultimate in replication while still maintaining the agility and flexibility for which *noMAX products are renowned.

BENEFITS

***noMAX garrison is the ultimate in High Availability solutions incorporating all the features of *noMAX sentry and *noMAX defender as well as enabling the replication of IFS.**

- + *noMAX garrison offers secure, reliable data, object and IFS replication.
- + Flexibility is the key. *noMAX garrison is fully spec'd with a huge ranges of tools and technology, yet it still runs as quickly and efficiently as the other *noMAX products.
- + You can migrate to *noMAX garrison easily and cost effectively from both *noMAX sentry and *noMAX defender.

THE *noMAX SUITE OF PRODUCTS

Provides real-time replication of IFS, including file paths, structures and IFS data.

product overview

*noMAX - CAN YOU AFFORD NOT TO?

In the current global environment, no business can afford to lose its core information yet many are still under-resourced when it comes to their Disaster Recovery solution. The *noMAX Suite of Products offers secure, reliable cost effective protection for critical business information on your iSeries.

How secure is your information?
How much downtime can your business afford?
How important is your data to you?

ABOUT MAXIMUM AVAILABILITY

Maximum Availability is responsible for the creation of the successful *noMAX suite of products, the world leader in cost effective high availability and replication products. Maximum Availability has successfully completed hundreds of *noMAX installations in 26 countries, and delivers to a global client base from a number of international locations and via a network of strategic alliances and partnerships around the world.

Created with the distinct intention of taking advantage of the latest features of iSeries technology, and in particular the rapidly expanding realm of OS/400 Remote Journaling, *noMAX has proved itself to be extremely fast, easy to implement and uncomplicated to run. Cost effective and imminently scalable, the *noMAX suite of products has opened the door to secure data replication for all business, no matter what the size or scope of your operation.

Maximum Availability is an IBM Development Partner, and *noMAX has been certified as eServer Proven by IBM.

FEATURES

All of the products in the *noMAX suite integrate seamlessly and quickly with your existing technology. Installation takes little more than an hour; effortless implementation and minimal day to day maintenance requirement is the *noMAX difference.
